

SARVAJANIK COLLEGE OF ENGINEERING AND TECHNOLOGY
COMPUTER ENGINEERING DEPARTMENT

B. Tech. IV, CO, SEM - VIII, DIV - I
(Term : EVEN - 2025 - 26)

Internship Presentation
on

“Startup Pulse: A Production-Ready Startup Directory”

Subject Name : Internship (BTCO16804)

Prepared and Presented by

Shivam Mishra (Enrollment No. : ET22BTCO065)

Guided by

Prof. Urmi Desai
Assistant Professor

Details of Company/Industry

- Name : Axy Inc.
- Address :914 Avadh kontina,Vip Road, Canal Road Corner, near CB patel club, Surat, Gujarat 395007
- Web-site :<https://www.axy-app.com/>
- Industry mentor's Details :
 - Name : Aarsh Patel
 - Contact number :9904900341
 - E-mail :aarsh@axy-app.com

Presentation Outline

- System Architecture: High-performance rendering with Next.js 15 & React 19.
- Content Management System: Structured data handling via Sanity.io & GROQ.
- Authentication Framework: Secure identity management with Auth.js (GitHub OAuth).
- Optimization Strategies: Maximizing speed using Partial Pre-rendering (PPR) & ISR.
- Technologies Learned: Key technical skills and tools mastered during development

System Architecture: Next.js 15 & React 19

- Next.js 15 (App Router): Implemented a server-first architecture to ensure fast initial page loads and improved SEO.
- React 19 Hooks: Leveraged advanced hooks like useActionState for seamless form handling and state management.
- Server Components: Designed the system to render heavy logic on the server, significantly reducing the JavaScript bundle size for the user.*

Content Management System: Sanity.io & GROQ

- Headless CMS Integration: Used Sanity.io as a flexible backend to store startup pitches, author profiles, and curated playlists.
- GROQ Queries: Implemented Graph-Relational Object Query Language to fetch complex data structures with high efficiency.
- Real-time Synchronization: Utilized Sanity's Live Content API to ensure the UI updates instantly when new data is submitted.

Authentication Framework: Auth.js (GitHub OAuth)

- Secure Social Login: Integrated GitHub OAuth to provide a frictionless and secure registration process for entrepreneurs.
- Session Management: Used Auth.js to manage user sessions securely across the client and server.
- Author Identity Mapping: Automatically linked GitHub profiles to Sanity author documents for automated profile creation.

Optimization Strategies: PPR & ISR

- Partial Pre-rendering (PPR): Implemented a hybrid rendering model where the static page shell loads instantly, while dynamic parts (like view counts) are streamed in.
- Incremental Static Regeneration (ISR): Configured background revalidation (e.g., every 60 seconds) to keep startup details fresh without slowing down the server.
- Data-Cache Consistency: Optimized the retrieval process to ensure that the user always sees the most recent pitches.

Technologies Learned

- Web Frameworks: Mastery of Next.js 15 and React 19 for building production-grade full-stack applications.
- Backend Development: Gained hands-on experience with Fastify for building high-performance, low-overhead server logic.
- Database & ORM: Developed expertise in PostgreSQL for relational data storage and Prisma for type-safe database access and migrations.
- Data Querying: Learn GROQ and Sanity.io for managing structured content and complex data relationships.

Conclusion

The Startup pulse project successfully demonstrates a modern, high-performance approach to Full-Stack development. By utilizing Next.js 15 and React 19, the system achieves enterprise-grade speed and scalability while maintaining a secure and interactive environment for users.
